Korea and Nebraska
StratCom Comrades in Arms

As a representative of Nebraskans for Peace, State Coordinator Tim Rinne was invited to deliver a talk on StratCom at the “International Conference against the Asia Pacific Missile Defense and for the End of the Arms Race” in Seoul, South Korea April 16-18. Through meetings with Korean political activists and fact-finding trips to the countryside (including visits to several American military bases and the “De-militarized Zone” separating North and South Korea), he had a chance to witness first-hand the commanding presence of the U.S. military on the Korean Peninsula. And, as the text of his speech, “Korea and Nebraska—StratCom Comrades in Arms,” illustrates, the fingerprints of U.S. Strategic Command are everywhere to be found in this Asia-Pacific nation.

I want to begin by thanking “The Korean Committee for the International Conference against the Asia Pacific Missile Defense and for the End of Arms Race.” Nebraskans for Peace (the organization for which I work) hosted last year’s Global Network Against Weapons and Nuclear Power in Space conference in Omaha, Nebraska—and I have a personal appreciation for just how much work goes into putting on one of these events. So I thank you all for your hospitality and effort.

As a Nebraskan who has never before been to Korea, I wish I was visiting your beautiful country under more genial circumstances. But as you know, my home state of Nebraska is the headquarters for U.S. Strategic Command—the historic

command center for the U.S.’s nuclear deterrent... and Strategic Command ("StratCom") has been an all-too-familiar presence in the lives of the people of the Asia-Pacific for now six decades.

More than any other region on earth, the Asia-Pacific has had to contend with the menace of America’s nuclear arsenal: from the morally reprehensible atomic bombings of Hiroshima and Nagasaki... to the more than one hundred atmospheric nuclear tests on your lands and waters... to the unremitting threat of nuclear attacks against the Communist nations of the former Soviet Union, North Korea, Vietnam and China.

Since 1948, the fate of the Asia-Pacific has rested in the hands of U.S. Strategic Command on Offutt Air Force Base in suburban Omaha—just an hour from where I live.

Such belligerence on the part of the U.S.—spanning decades—has hardly laid the ground for a mutual and cooperative relationship between our two hemispheres. The countries of the Asia-Pacific have been right to focus so much of their attention on the dangers of the U.S.’s nuclear strategy and the urgent need for international disarmament by all nuclear states.

After the horrifying exhibition of Hiroshima and Nagasaki, one can hardly imagine a peril greater than that posed by StratCom’s stockpile of nearly 5,400 nuclear weapons. The mere idea explains why for generations we have referred to nuclear war as the ‘unthinkable.’

In the wake of the September 11, 2001 attacks on the U.S., however, the threat posed by StratCom—unbelievable as it sounds—has grown even more ominous and immediate.

Within months after the attack of 9/11, StratCom began undergoing a complete overhaul in its role and mission at the hands of the Bush/Cheney Administration. In addition to its historic responsibility for “Nuclear Deterrence,” StratCom was suddenly charged with the mission for “Space.” In early 2003, the command was assigned four more missions: “Missile Defense,” “Intelligence/Surveillance/Reconnaissance,” “Information Operations” and “Full-Spectrum Global Strike.” In 2005, “Combating Weapons of Mass Destruction” was added to its duties. And finally in 2007, StratCom was awarded “Cyberspace”—for a total of eight missions.

In addition, under the Bush/Cheney Administration’s revised “Nuclear Posture Review” of 2002, StratCom’s nuclear mission was openly shifted from ‘defensive’ to offensive—permitting ‘first strike’ nuclear attacks.

Today, the command is waging the White House’s global “War on Terror” and actively pursuing the U.S. government’s goal of militarily dominating space. With its international Intelligence/Surveillance/Reconnaissance (ISR) system, Brunswick, Maine-based U.S. Strategic Command (StratCom) is prowling the skies above the entire globe from its command center in suburban Omaha—just an hour from where I live.

Korea and Nebraska, continued

Over a five-year span, StratCom went from being a purported deterrent whose ‘doomsday’ weapons were ‘never supposed to be used’ to now ‘being offensively used for everything.’

There really isn’t anything anymore that doesn’t fall, somehow or the other, under StratCom’s umbrella. Under the U.S.’s revised “Unified Command Plan,” StratCom—with its space assets, comprehensive mission array and cross-service authority—now serves as the ‘enabler’ for all the other regional unified commands (NorthCom, SouthCom, EuCom, CentCom, AfriCom and, of special interest to you here in the Asia Pacific, PaCom)... Which is why, incidentally, the adoption of a new space treaty—PAROS—is so important. It will limit StratCom’s power.

The current StratCom Commander, Air Force General and former astronaut Kevin Chilton, even proposed in congressional testimony last year that Strategic Command’s name should be changed to “Global Command”—to better reflect the global nature of its missions.

StratCom, as the title of last year’s Global Network conference sized it up, is now “the most dangerous place on the face of the earth.”

And its fingerprints are everywhere:

- Those so-called ‘Missile Defense’ installations being proposed for Poland and the Czech Republic that have been infuriating Russia and threatening to restart the Cold War—that’s StratCom.
- StratCom as well coordinated the shootdown in February 2008 of a falling U.S. spy satellite with a SM III missile launched from an Aegis-class Missile Defense crusier from here in the Pacific Ocean—thereby demonstrating that America’s so-called Missile ‘Defense’ system can in fact double as an OFFENSIVE, anti-satellite weapon.
- Those CIA Predator drones that are routinely flying over Pakistani airspace and firing Hellfire missiles at alleged al-Qaida targets are flown with the aid of StratCom’s space assets, with intelligence supplied by StratCom spy satellites.

- And those ECHelon National Security Agency listening stations in Misawa, Japan; Pine Gap, Australia and Waihopai, New Zealand—that are eavesdropping on your phone calls and perusing your emails—are all part of StratCom’s international Intelligence/Surveillance/Reconnaissance network.
- The recent clash between a U.S. spy ship and Chinese naval defenses in the South China Sea is linked to StratCom’s Intelligence/Surveillance/Reconnaissance mission as well, as the U.S. sub-hunting craft was conducting spying activities near the site of a new Chinese submarine base.
- And finally, as our South Korean hosts and friends know all too well, StratCom’s presence here on the Korean Peninsula is nearly universal—to the point where your country has become the forward operations base for everything from launching preemptive nuclear or conventional strikes against North Korea, to the deployment of a Missile Defense system across the Asia Pacific, to the economic and military encirclement of China.

It is virtually impossible nowadays to talk about any military-related activities or events in South Korea without tracing them back to U.S. Strategic Command.
by Loring Wirbel

Military space analyst Loring Wirbel of “Citizens for Peace in Space” in Colorado Springs has been an indispensable resource in helping NFP understand the drastic transformation that’s taken place at U.S. Strategic Command since 9/11. A nationally recognized authority on the militarization of space (and a board member of the Global Network Against Weapons and Nuclear Power in Space), he is also—as the speech below reveals—an astute political observer. He delivered this talk in South Korea at the “International Conference Against the Asia Pacific Missile Defense and for the End of the Arms Race” April 16-18.

Canadian activist Naomi Klein told The Progressive magazine in its February 2009 issue that she is tired of the progressive activists with “selective amnesia.” They cannot remember anything bad that happened before the Bush Administration, and do not recognize bad policy coming from the White House after Bush left. Naomi Klein was talking about the financial problems Bill Clinton started with the Glass-Steagall banking act.

But activists working for peace in space know what she is talking about. The U.S. Space Command’s “Vision for 2020” document was written during the Clinton years, not the Bush years. And many aggressive military space policies are continuing unchanged in the Obama era.

In March 2009, Anthony Romero, executive director of the American Civil Liberties Union, said that the White House has only done a moderate job of changing executive-branch abuses from the Bush Administration, and of implementing the changes suggested in ACLU’s 100-day “Actions for Restoring America” document. While Obama rapidly called for the closure of Guantanamo, his administration did not change its state secrets position in the case of Binyam Mohamed, nor did it change the Bush position on lawsuits involving the National Security Agency (NSA) and warrantless surveillance.

From our perspective, Obama’s actions regarding the future direction for the U.S. Missile Defense Agency—one of the central concerns of this conference—have also been mixed. There have been two positive developments: First, at his request, the Pentagon is considering a budget cut of approximately $2 billion, or 20 percent, in the agency’s $10 billion budget. The new director of MDA, Army Lt. General Patrick O’Reilly, has indicated that no weapons will be fielded without testing, as was common in the Bush Administration. Even General James Cartwright, vice chair of the Joint Chiefs of Staff (and former StratCom Commander), is warning that any missile defense beyond short-range “Terminal High-Altitude Area Defense” (THAAD) is probably obsolete and may be canceled. And secondly, President Obama has made an informal offer to Russia to postpone or cancel the planned missile-defense system in Poland and the Czech Republic—if Russia will help dissuade Iran from proceeding with nuclear weapons development.

However, there is no real discussion within the Pentagon for taking existing missile-defense weapons in California and Alaska off alert. There is no intention of cutting back on Asia deployments of Aegis cruisers for sea-based missile defense. Obama seems to be as willing as George Bush to respond decisively to further North Korea tests of the Taepodong-2 missile system. It is instructive to look at a proposal in the March 12 New York Times by MIT Professor Theodore Postol, suggesting that European ground-based missile defense be abandoned in favor of a boost-phase kinetic missile defense that would be carried on UAVs (Unmanned Aerial Vehicles), which would fly over “nations of concern” such as Iran and North Korea. It seems likely that President Obama would promote such a concept as “responsible” missile defense.

While visiting a newly expanded U.S. Army base with StratCom connections, the delegates in South Korea saw almost a dozen mobile PAC-3 (Patriot Advanced Capability) launchers parked beyond the razor-wired fence. Lockheed Martin describes its PAC-3 system as “the world’s most advanced, capable and powerful terminal air defense missile.”

Obama’s Changes in Military Policy Are Driven Less by Philosophy than by Economic Reality

While visiting a newly expanded U.S. Army base with StratCom connections, the delegates in South Korea saw almost a dozen mobile PAC-3 (Patriot Advanced Capability) launchers parked beyond the razor-wired fence. Lockheed Martin describes its PAC-3 system as “the world’s most advanced, capable and powerful terminal air defense missile.”

However, there is no real discussion within the Pentagon for taking existing missile-defense weapons in California and Alaska off alert. There is no intention of cutting back on Asia deployments of Aegis cruisers for sea-based missile defense. Obama seems to be as willing as George Bush to respond decisively to further North Korea tests of the Taepodong-2 missile system. It is instructive to look at a proposal in the March 12 New York Times by MIT Professor Theodore Postol, suggesting that European ground-based missile defense be abandoned in favor of a boost-phase kinetic missile defense that would be carried on UAVs (Unmanned Aerial Vehicles), which would fly over “nations of concern” such as Iran and North Korea. It seems likely that President Obama would promote such a concept as ‘responsible’ missile defense.

Further, in existing theaters of war, the Obama Administration supports intelligence and force-deployment methods begun under Bush. CIA Director Leon Panetta said he thinks the armed flights of UAVs over Pakistan and Afghanistan have been successful. Intelligence flights of unarmed UAVs throughout Iraq, Afghanistan and Pakistan will likely be increased. Intelligence-sharing with Israel, which was expanded by Bush prior to the December invasion of Gaza, is unlikely to be limited by Obama unless the new prime minister, Benjamin Netanyahu, significantly expands Israeli control in the Occupied Territories.

Same old, same old?

Does this lead us to the conclusion, favored by Ralph Nader, that there is no difference between Democrat and Republican policies? Not exactly. Former Vice President Dick Cheney sought a vast expansion of executive power that was unlike any seen in a century. Former Defense Secretary Donald Rumsfeld denounced the notion of “soft power,” and criticized “Old Europe” because the mainstream EU nations would not support preventive ‘first-strike’ war. Clearly, the Obama Administration recognizes that the U.S. is an empire in decline, and that it can only assert authority so long as it recognizes the role of other nations that hold the keys to economic hegemony.

But no less than the Republican Party, the Democratic Party leadership fully recognizes that imperialism and ‘exceptionalism’ are foundational principles in American political life—and philosophies that remain quite popular with U.S. citizens. The invasion of Iraq, for instance, only became unpopular when its goals bogged down in 2004. U.S. citizens do not relish the thought of seeing their superpower status decline, and are willing to listen...
to any leader who tells them they can still be Number One. The biggest danger (as we saw in the run-up to the Iraq invasion with the propaganda about Saddam Hussein’s WMDs) is when our national leaders attempt to use populism to rally U.S. citizens against an adversary. Thus far, Obama has avoided using such populist rhetoric. If the conservative commentators who now rule the Republican Party find a populist crusade to rally citizens against a new ‘enemy,’ however, we can expect such crusades to become popular, particularly as citizens’ fears escalate in times of economic uncertainty.

**Is there a bright spot?**

The brightest spot may be that same economic uncertainty. Continuing the infrastructure of the Bush Administration—in terms of future space weapons or current space platforms used in first-strike warfare—simply cannot be afforded. The apparent need to go through a second round of cutting the budget in June-July 2009 will confront the Defense Department and intelligence establishment with uncomfortable choices.

For example, the current plans call for the Missile Defense Agency to see up to $2 billion of its $10 billion annual budget cut. The number of cuts could grow by the summer. This may mean that space-based successors to the “NFIRE” weapons test platform are canceled or postponed. It is unlikely as well that the airborne laser for midcourse missile defense will move beyond simple tests.

It is important to note that some programs of missile defense have already been handed over to active military wings. The ground-based missiles in California and Alaska, for example, now are under the control of Air Force Space Command and Strategic Command. The Theater Missile Defense weapons on Aegis cruisers are under Navy control with Air Force input. However, the operational budgets of the military service commands are also likely to face significant cuts, with all available funds going to Iraq and Afghanistan.

In space-based intelligence, the budgets of the National Reconnaissance Office (NRO) and National Security Agency (NSA) now are estimated at $15 billion each, with the total U.S. intelligence budget estimated at $66.5 billion. This is a 30 percent increase from the last published figures of the Director of National Intelligence, and is simply unsustainable in a budget crisis. More space intelligence will have to be outsourced to private platforms, and more advanced satellites like the “Transformational Satellite System” will have to be delayed.

What does this mean for deployed forces on the ground? Targeting of gravity bombs and missiles using Global Positioning System satellites is not likely to be affected, because a full constellation of GPS satellites is already in orbit. As a result, the advantages in GPS-powered bombs like the “Joint Direct Assault Munition” will still be realized in areas as diverse as Gaza (where Israel has access to U.S. space technology), and the Pakistan/Afghanistan border region.

Those networked battlefields that depend on space-based communications and intelligence, however, will experience significant reductions in capability. The ambitious multi-service programs such as “Future Combat Systems” and “Net-Centric Warfare” will either be delayed or have capabilities canceled, because the satellites will not be there to support the system. On March 11, 2009, the U.S. Government Accountability Office warned that the developers of Future Combat Systems and the Joint Strike Fighter may attempt to field the systems without adequate testing, because they would otherwise be unaffordable.

Indeed, the common problems of the NRO, Air Force and NASA were deemed so severe in the aftermath of the Obama inauguration, the White House es...
Troubling Questions about ‘Cap and Trade’

Now that the Environmental Protection Agency has belatedly classified greenhouse gases as pollutants, how do we get to the point of street-level regulation? Now comes the tough part: ‘walking the walk.’ How do we really cut emissions of greenhouse gases before feedbacks in the Earth system make any such effort futile? What do we really change in our daily lives?

To regulate greenhouse gases, they must be measured. So the EPA is preparing to order large U.S. corporations to compile and report their greenhouse-gas emissions. While they are at it, the EPA should require the same kind of audits within government agencies. President Barack Obama should order the Pentagon, for example, to calculate its carbon footprint—including the first-ever report of the greenhouse-gas emissions for modern, mechanized warfare in Iraq and Afghanistan.

Cap and Trade

To curtail greenhouse gases generally, the only strategy currently generating any political momentum is ‘cap and trade’—with Wall Street investors in particular viewing it as a potentially lucrative new market in which to make money. A straight-forward ‘carbon tax’ would undoubtedly be more efficient, but nobody—in this political environment—wants to institute a new tax. For such an approach to be at all palatable, taxes would have to be cut on things we would like to encourage (lowering the income tax on labor would be a possibility), while raising them on ecologically destructive activities, such as greenhouse-gas emissions.

With a cap-and-trade system, a ‘cap’ is placed on the volume of greenhouse-gas emissions and then the emitting industries are allowed to ‘trade’ for the right to pollute. Companies that do not emit greenhouse gases to their limits can sell their rights to others, creating a market that rewards emission reductions. Over time, limits tighten, raising the price of pollution.

The cap-and-trade system operating in Europe relies on the market to establish a gradually shrinking target for Europe’s carbon dioxide emissions, and then divvies it up by country. At regular intervals, each country then allocates ‘shares’ to power plants and other factories which are less than their previous use, thereby forcing them to cut emissions, get credit for reducing greenhouse gases in developing countries, or buy spare ‘allowances’ from other firms to make up the shortfall. That creates a market—and a market price—for allowances.

“Cap and Trade does not have a prayer of phasing out fossil fuel emissions fast enough to save the planet, e.g., allowing us to phase-out coal-fired power plants.”
— James Hansen, director, NASA Goddard Institute

‘Cap and Hustle’

Use of such a cap-and-trade market in Europe, however, has shown itself to be vulnerable to various business hustles. The European Union’s issue of a limited number of industrial permits to emit carbon provoked an old-fashioned ‘lobbying for favors’ that enriched some of the EU’s biggest polluters and (by the end of 2008) produced very little actual reduction in greenhouse gases.

Large utilities and basic industries convinced the European Union to give away most of the permits free—in large numbers—so the market nearly collapsed. Europe eventually issued a new system of permits that traded about $80 billion during 2008, most of which was recouped from consumers in the prices of goods and services (often as higher electric bills). However, the volume of carbon dioxide emitted by plants and factories participating in the system rose 0.4 percent in 2006 as compared to 2005 and another 0.7 percent in 2007.

Germany’s power company RWE, Europe’s largest industrial source of carbon dioxide, reaped $6.4 billion in three years. Companies throughout Europe took in about $374 billion at the peak of the market, as various national governments (most notably Germany) added exemptions and bonuses that fattened the take.

“It was lobbying by industry, including the electricity companies, that was to blame for all these exceptional rules,” said Hans Jürgen Nantke, the director of the German trading authority, part of the Federal Environment Agency.

Cap and Dividend

James E. Hansen, director of NASA’s Goddard Institute for Space Studies, proposes that carbon taxes be returned to people under a “Cap and Dividend” program to help individuals cope with higher energy prices. He described the concept:

“In hard economic times with high fuel costs, the public will rebel against any carbon tax—unless 100 percent of the tax is returned immediately, monthly, to the public on a per-capita basis. The public is fed up with politicians spending their money in cahoots with alligator-shoe-wearing, toad-eating (just kidding) lobbyists. Carbon taxes will drive energy innovations and the dividend will spur the economy. Taxes can be fruitfully initiated on a national basis; any trade disadvantage should be eliminated via an import duty on products produced in other countries that do not impose a comparable carbon tax, with 100 percent of the duty added to the per capita dividends.”

According to Hansen, “Cap and Trade does not have a prayer of phasing out fossil fuel emissions fast enough to save the planet, e.g., allowing us to phase-out coal-fired power plants. Clearly there must be people in the Obama Administration who understand that. Yet Cap and Trade is still talked about as if it were something good. One wonders: do they really believe we have ‘a planet in peril’?”

A ‘cap’ raises the price of energy, just as does a simple honest carbon tax on oil, gas and coal at the first sale at the mine or port of entry,” Hansen stated. The term “cap” is a euphemism, Hansen said, “disguising the fact that it is a tax, assuming that the public is a bunch of dummies who will...”
Taking an Economic ‘Wrong Turn’

How Our Chance to Build a Sustainable Economy Is Being Undermined

by Hendrik van den Berg
UNL Professor of Economics

In my last article (“We’re Never Getting Back to ‘Normal,’” April 2009 Nebraska Report) I explained that—even if the current financial crisis ends—things cannot return to what they were because the economic practices of the past quarter of a century were simply unsustainable. For an entire generation, we were living beyond our (and the earth’s) means and the bubble has finally burst.

The Lessons of the Great Depression

Our experience from the Great Depression suggests that governments around the globe should now be instituting real financial and economic reforms to reverse some of the familiar economic problems like growing income inequality, unemployment, and stagnant wages, as well as confronting new problems such as environmental destruction. When the U.S. economy collapsed from the financial crisis that followed the stock market crash of 1929, Congress eventually passed the “Securities Act” and the “Glass-Steagall Act” in 1933 and the “Securities Exchange Act” in 1934. The regulatory structure these laws set up provided for more market transparency and information, prohibited financial institutions from engaging in conflicting and overly-risky activities, and established strict oversight of financial markets. They prevented a recurrence of financial crises for nearly 50 years.

At the same time, the experience from the Great Depression is also sobering. Let’s not forget that it took from 1929 until 1933 before real reform was passed by the Congress and signed into law by President Roosevelt (newly elected after nearly four years of inaction under President Hoover). Unemployment had to rise to nearly 25 percent and a large percentage of the U.S. banking industry had to openly fail and lose a large proportion of Americans’ savings before reform measures were finally taken. We are not yet in such a dire situation today, so there may not yet be the urgency to change economic and financial policies.

Still, one might expect that we learned something from the mistakes of the past and that, this time, another Great Depression will not be necessary before we take measures to prevent excesses in the financial industry from undermining the global economy. Economically and politically, however, we seem to have forgotten the lessons of the Great Depression. In fact, for over 30 years now, we have been dismantling or undermining the Depression-era reforms.

As early as the 1960s, when memories of the Depression were still fresh, the banking industry began actively lobbying for weakening the Glass-Steagall provisions that prohibited banks from engaging in risky, non-banking activities. This lobbying brought results in the 1970s, when banks were given more freedom to set interest rates on loans and deposits. The public seemed to be happy with the higher interest rates on their deposits and not the least bit suspicious of the deeper consequences.

... As long as things do not get much worse, there won’t be any political pressure to bring about real economic change.

continued on page 10
School is the place where children, who are the future, are trained and educated. If violence is escalating in that atmosphere, something is wrong. Peace and nonviolence in the future will only come through the education of this generation’s children, and school is the most important place to begin.

One step involves the curriculum and options presented to students. Textbooks seem to glorify war and violence through their focus on them, and often nearly skip over important nonviolent people and events. I had the opportunity this year to take online classes through “Virtual High School,” and one that was offered was “Peacemaking.” In this class, I learned many valuable things, including peace history, the value of communication and the respect for many different viewpoints, that were not taught in any classroom. Such a class needs to become a more widespread option to complement war education. Or perhaps teachers could spend more time on important historical nonviolent movements, their success and the results. Also, the presence of military recruiters in schools seems to reinforce that violence is acceptable and necessary. Such incentives they offer to uncertain students can convince them to take a path that they may not have chosen without the direct pressure right in school, had they not been allowed to promote military involvement on school grounds.

Students and parents who show interest in this should inform others through presentations, articles, editorials and other means, thus sparking questions and interest from a wider body of support. Existing organizations, such as “The Coalition Against Militarism in Our Schools,” could help. This would encourage their teachers and school administrators to discuss the idea with the school board and obtain clearance to offer this education or discourage recruitment. After experimentation and evaluation, if the result is positive, these measures should be presented to the state’s department of education to allow more extensive publicity and execution if approved. However, teachers would have to be trained in that area, the curriculum revised and new materials purchased, and the military would not take kindly to losing a large field of potential recruits. Because of the dedication, work, organization and scale involved, this option is probably least viable, although it is not impossible.

Domestic issues and a poor home environment can lead students to channel their feelings through violence, bullying or unhealthy detachment, because they don’t recognize other more positive responses. A nearby town has a program called “Mother to Mother Ministry,” which pairs mothers—generally from different socioeconomic backgrounds—to support, aid and teach each other through friendship. Whole families benefit from this, and it can change a child’s home life and views so that love becomes stronger than violence. Such a program, implemented in all communities, could decrease household problems and in turn diminish the emotions leading to violence.

The first step would be getting the word

Karen Jantzen

It hasn’t been very long since the last media coverage of a school shooting, with one student turning against and reacting violently upon fellow peers or teachers. Other acts of violence at school are also becoming more common. A few years ago at my school, a student planted a pipe bomb, but his plan was discovered, thus narrowly averting disaster. Last year, someone was expelled after threatening to bring a gun to school; another student was suspended for several days after threatening to kill a classmate. Just a few weeks ago, a boy sitting at my lunch table was kicked out for having his pocket knife with him. School is the place where children, who are the future, are trained and educated. If violence is escalating in that atmosphere, something is wrong. Peace and
Obama’s Policy Change, conclusion

Obtained a “Committee for U.S. Space Leadership” to discuss a revised national policy, a “Space Council” and a possible “Presidential Space Advisory Board” to hammer out a plan by the end of 2009 for better utilization of space. But notice that the committee referred to “U.S. Space Leadership.” President Obama is unlikely to alter those aspects of the Bush National Space Policy that advocated a dominant U.S. role in determining how all nations use space.

Ordinarily, the intelligence services of UKUSA and NATO, as well as the space services of Israel, Japan and other nations, could augment the U.S. military in regional theaters. But this financial collapse is global. No one will be able to pay for the weapon systems that looked achievable just two years ago.

“G20/Europe” and Its Aftermath

The first week of April proved a critical time for the Obama Administration. European leaders had to be convinced to support a $1 trillion global bail-out package. NATO leaders surrendered to the concept of expanded Afghanistan deployments, but with some caution. Meanwhile, Obama had to deal with a recalcitrant North Korean regime conducting a test firing of the Taepodong-2 rocket April 5, and he used the opportunity to argue in Prague for global nuclear reductions.

Many more events were taking place in early April behind the scenes. The U.S. Air Force launched a “Wideband Global Satcom” (WGS) satellite April 3, significantly increasing its global communication capability. The Director of National Intelligence sought White House approval for an expensive “2 + 2” satellite to replace the canceled “Future Imagery Architecture” satellite system. The Air Force insisted it did not have a problem with this expensive new system, but it obviously meant less money would be available for other satellites. At the “National Space Symposium” in Colorado Springs, Intelsat executives said they had been asked by Air Force officials to use a commercial satellite to carry attack information for UAVs over Afghanistan, which they agreed to do. Space Command commander General C. Robert Kehler said that the military will rely on commercial satellites for 80 percent of its traffic, even after WGS was launched.

The Air Force also made some big changes in early April to reflect the way the Pentagon considered warfare. Control of nuclear weapons, once handled by the Space Command for Strategic Command, was placed under the new “Global Strike Command” at Barksdale Air Force Base. During the Bush Administration, the distinction between conventional and nuclear weapons had been made less clear, perhaps making nuclear war easier. Now, the lines between nuclear and conventional weapons are clearer, but the Pentagon is emphasizing the “important role” of Global Strike Command, even as Obama says he wants to reduce nuclear weapons.

The Air Force also established its new Cyber Command as the 24th Air Force at Lackland AFB near San Antonio, Texas, underneath the authority of Strategic Command. Cyber Command will perform computer attack and computer defense for the U.S. government. It is ironic that attention is being paid to Chinese efforts to probe computers through South Asia, when the U.S. effort is far bigger and more secret.

And what of Pacific Command (PaCom) and its role in missile defense? When North Korea launch programs were first announced in March, Pacific Command, like Japan’s defense forces, was boasting of its ability to shoot down any uncertain North Korean payloads. The mere presence of Aegis cruisers can play a provocative role in regional disputes. But by the end of March, military officials were being told to avoid emphasizing the role of Aegis. No one at the National Space Symposium emphasized this capability. The assumed failure of the satellite payload on April 5 made the Pacific Command effort to show the flag appear exaggerated. But it is certain the Aegis will continue to be valued—not for its role in so-called “Theater Missile Defense”—but as a means of demonstrating U.S. power in potential regional battlefields.

As he came back from Europe, Obama realized that the proposed missile-defense bases faced significant opposition in Poland and the Czech Republic. He realized that Iranian and North Korean efforts to develop new weapons and space technologies cannot be halted through brazen language or new space weapons, but will be continuing issues for negotiation and dialogue. He also realized that the limits of the fiscal 2011 budget, and even the undecided elements of fiscal 2010, will mean cutbacks in the Missile Defense Agency, National Reconnaissance Office and National Security Agency. Military space officials do not assume they can continue with the “Transformational Satellite” or that the “Space-Based Space Surveillance” satellite will expand beyond one satellite to be launched in July. These are the new realities of the continuing recession.

If there is any silver lining for U.S. imperialists in all this, it is that the crisis will affect nations that are considered adversaries of the United States. In the aftermath of the apparent April 5 satellite failure, North Korean expansion of Taepodong-2 and -3 programs likely will be delayed, and Iran could find any weaponization programs in its uranium enrichment program may be unaffordable—particularly in an era of low oil prices. The only U.S. adversary not affected by such a crisis, of course, is the stateless opponent, as represented by various “Salafist Muslim” groups.

It is not comfortable for peace activists to attach their hopes to a wish that economic conditions continue in their present state of near-depression. But it is important to recognize that President Obama will not abandon certain policies of space domination and control because he is a ‘peace-loving’ president. He believes in U.S. dominance of the planet, as do most Democrats. There is a significant difference between Democrats and Republicans in the way such powers are exercised, but often, the Democrats require more careful observation by the peace community.

I will end with a story from 180 years ago, during the U.S.’s first major use of ethnic cleansing. After Congress passed the “Indian Removal Act” of 1830 requiring all Indian Tribes east of the Mississippi River to be forcibly moved to Oklahoma, President Andrew Jackson personally negotiated with the Choctaw and Creek Tribes. He told them, “I want you to be moved by force, but I will never lie to you. Some of the people who say they want to preserve the tribes in Georgia and Tennessee say they want you to stay, but they wish to destroy your culture. Some people like Thomas Jefferson have given public speeches supporting the tribes staying here, but they have written privately to friends that they hope that the Indian Removal Act passes. I will tell you to leave. Other white men will make nice promises, but those promises are lies.”

Do not misunderstand me. I am not nostalgic for the days of George Bush simply because he was an honest world conqueror. But as Andrew Jackson warned the Choctaw, we must carefully watch those who would promise hope and change while delivering the same message of war.
Taking an Economic ‘Wrong Turn’ continued

The Financial Industry Is More Politically Entrenched Today

The most ominous difference between today and the 1930s is the growing political clout of the financial industry. Note how it has been able to continue fleecing the taxpayer even after it was found to have been found fleecing sub-prime borrowers, credit card users, retirees and just about everyone. Some angry writers and citizens point to the financial industry’s excessive ‘greed’ and ‘arrogance.’ But such words only serve to deflect attention away from the true cause of the financial sector’s behavior: over the past 50 years it has amassed enough political power to effectively dictate economic and financial policy throughout the world.

Here in the U.S., despite a change in administrations and control of both houses of Congress by the president’s party, economic and financial policies are being set by people who were recently bankers themselves. The foxes are still running the henhouse.

Paulson, Summers, Geithner and other high-ranking government economic advisors are all from the financial industry. Geithner worked for Robert Rubin at Treasury. Geithner worked for Robert Rubin at Treasury.

How do we end the dominance of the financial industry?

The best way to get there is the nationalization of the current bankrupt industry, followed by its reorganization into smaller, better-defined parts of the financial sector.

Yes, some things are different today. But the differences may lengthen the economic fall. One thing that is different today, compared to 1929, is that the government and most economists have learned something about macroeconomic policy. Even the George W. Bush administration quickly enacted a real fiscal stimulus package at the first signs of recession, and it did not wait years, as the Hoover administration did, to increase aggregate demand by increasing government expenditures financed by borrowing the savings that otherwise would not be spent. The White House is now actively pushing other countries to do the same, and most have. For example, China has increased government spending by an even greater percentage of its GDP than the U.S. has. Hence, we may avoid a world depression as deep as we experienced in the 1930s.

But, from a long-run perspective, the partially successful fiscal stimulus (at best, fiscal stimuli can only soften the fall) may actually make it more difficult to achieve a sustainable global economy. Perversely, the general level of public apathy means that as long as things do not get much worse, there won’t be any political pressure to bring about real economic change. There won’t be enough unemployed people to demand a reversal in the weakening of the social safety net, to improve healthcare or to improve education. Nor will people feel the need to substantially change their lifestyles, save more and stop wasteful consumption. If people’s savings are not totally wiped out, as they were in the Depression, there will be little pressure for new laws to re-regulate how much risk the financial industry takes with our money. And there will be less pressure to reestablish a more just and progressive tax system to fund Social Security, fund universal healthcare, and provide a good education through college for both rich and poor. Of course, the economic slowdown may be just worrisome enough to justify the postponement of serious environmental legislation.

In short, as long as there is enough fiscal stimulus to prevent a massive economic collapse, we will end up muddling through under the present laws and dysfunctional regulation, the broken social policies, and the shortage of funding necessary to create a more progressive society. So much for the ‘change’ we were promised.

We all know what they say about people who forget the lessons of history. According to the script, we again find ourselves with a financial crisis and in a very serious global recession—one that could still become another real depression.
the Treasury Department, who had the left
the helm of Goldman Sachs to become
Clinton’s Treasury Secretary, before pass-
ing the position over to Larry Summers in
1999. During the past decade, as head of
the New York Federal Reserve Bank,
Geithner technically oversaw and audited
Citibank—the world’s largest bank—
which was headed by, you guessed it, Rob-
ert Rubin. This is the type of “crony capi-
talism” for which we criticize developing
countries. It should not come as a surprise
that President Obama actively resisted calls
by several European leaders for increas-
ing international regulation of financial
firms during the recent G20 meeting in
London, pushing instead for all countries
to expand fiscal measures like increased
government expenditures. The IMF/World
Bank meeting in late April, where the U.S.
was represented by Treasury Secretary
Geithner and National Economic Council
director Summers (Obama’s chief eco-
nomic advisor), failed to resolve the regu-
lation/fiscal dispute.

The American public has not yet real-
ized that the financial industry is not on
their side. It seems to be more than will-
ing to side with Obama against those ‘so-
cialistic’ European governments seeking
more regulation. Calls for the nationali-
zation and reorganization of banks—a tactic
used by every capitalist government, in-
cluding ours, to deal with failures of small
banks—is labeled as socialistic and, there-
fore, not an option. We are now also see-
ing active bank lobbying against letting
judges alter the terms of mortgages in or-
der to avoid home foreclosures. “Poor
borrowers’ own fault,” chime in the con-
servative pundits.

Meanwhile, regulators have encour-
aged the largest banks to become even
larger by letting them acquire other failed
banks. And so the concentration of the fi-
nancial industry grows even denser. And
because the government assistance comes
without any strings attached, we now see
the bailed-out firms using bailout funds to
fund more PR, lobbying and congressional
campaign contributions, making it unlikely
the financial industry will ever be con-
strained by the government. You scratch
my back, and I’ll scratch yours is the po-
litical order of the day.

How Do We End the Domination
of the Financial Industry?

If we are to achieve the good outcome
suggested in my last article, it is absolutely
mandatory that the financial industry be
reduced to carrying out basic functions
such as 1) providing a safe place for sav-
ers to store their accumulated wealth, 2)
channeling those savings to investment
and R&D projects in an objective and effi-
cient manner, and 3) providing certain in-
urance services. More important, we need
the financial industry to change how it
handles the economy’s savings. We need
the financial industry to channel increased
savings to the new ‘green’ and social pro-
grams that underlie a more fair, just, and
livable economy.

The best way to get there is the na-
tionalization of the current bankrupt indus-
yry, followed by its reorganization into
smaller, better-defined parts of the finan-
cial industry. Most of the industry can
eventually be resold to private investors,
with the government hopefully getting
back most of the money paid to restore the
individual banks and financial firms to
solvent. Unfortunately, we may have al-
ready missed the opportunity of using the
industry’s financial plights to carry out a
nationalization and reorganization.

The generous bailout money thrown
at the private mega-firms with few strings
attached has now improved the financial
firms’ situation to where they can gener-
ate seemingly positive results, and na-
tionalization seems to not be necessary any
longer. And equally expensive fiscal stimu-
lus plans have prevented the massive eco-
nomic contraction that could mobilize the
public to demand real change. The govern-
ment’s commitments of hundreds of bil-
ions—even trillions—of dollars to “turn the economy around” and more to ‘save the financial industry that is critical to our economy’ almost guarantee that na-
tionalization and reorganization will not
be forthcoming. The banks and the obscene
incomes of the bankers will survive for a
while longer, and real change seems to
have been pre-empted.

Where is the public opposition to this
scheme to make the public pay to save the

never catch on. With all its hooks and eyes,
‘Cap and Trade’ will allow a lot of funny
business. At least we would get a few Wall
Street millionaires back in business—via
speculation and gaming the Cap and Trade
system (funded by John Q. Public, of
course).”

Hansen said he had read on
duro.com that the number of lobbyists
in Washington, D.C. working to influence
federal policy on climate change increased
in the past few years by 300 percent to
2,340 lobbyists: four climate lobbyists for
every member of Congress. “At least the
alligator shoe business is doing well. Not
too good for alligators, though,” he said.

“Merle Hansen is dead and buried.” Hard words.

I last saw Merle at a recent Nebraskans for Peace Annual Conference as he struggled down the hall to the dining room with his lifelong friend, Dutch Hoppe. As we shook hands, he said—his voice rough with age, “Thank you for what you do.” He was in his mid-80s, afflicted with Parkinsonianism, feeble, but his still purposeful eyes spoke volumes. Merle wanted me to be up and doing.

The *Lincoln Journal Star* published an article about Merle’s death—all about the AAM, the NFO, the tractorcade and the Farmer’s Union. Not one word of Merle’s quest for peace and justice.

When we celebrated 40 years of NFP, we recalled ACT I, scene 2, of the play of its beginning: Arlo and Merle with Tom Rehorn, the preacher fired for opposing the war in Vietnam, gathered around Tom’s kitchen table. A fired preacher and two farmers about to change the world. But as Margaret Mead said about little purpose-filled groups, they can.

Merle’s first talk to me at UNL, to students, to anyone who would listen, concerned the fate of Vietnam’s landmined farmers and of the poor in our country. He told of our agreements at Geneva. He told how, for his opinions, he had been threatened with the poison-
